

8004 VA

1/8 DIN

Valve Actuator Controller

- Programmable 3-Wire Valve Actuator or Time Proportional Output
- Open or Closed Loop Servomotor Control
- Three Logic Inputs
- AUTO/MAN Transfer with Programmable Wire Positioning
- Three Year Warranty

Description

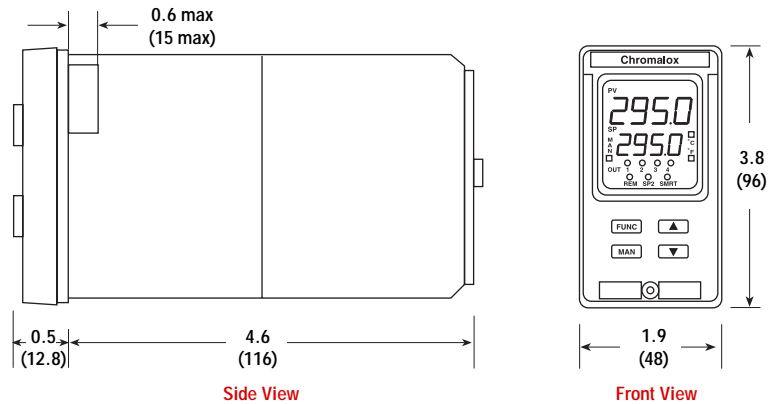

The 8004 VA is designed to drive a 3-wire valve actuator. The output can be used as a closed loop output with feedback potentiometer or as an open loop output with or without valve position indication. The relay outputs are interlocked and can be configured as either reverse or direct acting. Each of the

relays are rated at 3 Amps, 250 Vac. Output #1 can also be used as a time proportioning output.

The 8004 VA also features three logic inputs that can be used for selection of:

- Setpoint
- Auto/Manual Mode
- Local/Remote Mode.
